

FOR IMMEDIATE RELEASE

IMCORP Reaches Landmark Achievement of 150 Million Feet of Assessed Cable Systems

IMCORP's Factory Grade® technology has improved the reliability of more than 150,000,000 feet of power cable systems globally.

MANCHESTER, Conn., January 1, 2017 IMCORP, the leading global provider of the Factory Grade® assessment for power cable systems, is proud to announce a landmark achievement in its cable reliability programs surpassing 150 million feet in assessed cable systems since introduction in 1996. Customers around the world have experienced great success implementing IMCORP technology to evaluate their new and aging cable systems, realizing tens of millions of dollars in savings through deferred replacement of their cable assets. In reaching this significant milestone, Bruce Broussard, IMCORP President and COO indicated, "The utilization of the unique Factory Grade® technology, we provide to the leading utilities and sustainable energy producers, is substantially reducing the cost of ensuring power cable reliability by eliminating thousands of future outages and saving our clients millions of dollars compared to traditional means. This is a significant benefit to the electricity consumer."

The Factory Grade® technology provides an accurate condition assessment of each cable and locates defects that have a potential to cause failure. This data empowers utility, renewable energy and facility management customers to assess and rehabilitate cables based on expected performance. This process not only saves clients millions of dollars, but positively impacts system reliability by pinpointing issues that need to be addressed. The net result is dramatically more efficient use of available budget to improve the reliability of their cable network.

IMCORP assessment programs also provide significant benefits to the environment. By reducing trenching, waste of precious resources utilized in the manufacture of new power cables, and the greenhouse gases associated with manufacturing and transportation of cable, IMCORP and its clients continue to have a positive impact on their communities.

About INCORP:

IMCORP is the leading provider of power cable reliability assessment services for medium and high voltage (5kV to 500kV) power cable systems for both aged and new cable installations. Our **Factory Grade**® assessment is non-destructive, requires no hazardous materials, and is a cost-effective alternative to cable replacement. We identify the precise cable system **Rehabilitation** requirements, allowing the customer to **Certify** their cable systems to like-new condition.

Our professionalism and integrity have helped make us one of the fastest growing engineering services companies in the U.S. for 8 straight years (by Inc Magazine). Our goal is to partner with our clients to achieve the maximum reliability attainable at the lowest total cost.

IMCORP's technology improves the quality of life for everyone by enhancing the reliability of electric power delivered to them through underground power cables. Find out more at imcorp.com.
